LAMINATED PANELS WITH A PURPOSE

NuFiber Prelaminated FRP Panels

NuFiber panels are a durable, fiberglass sheet factory laminated to OSB, gypsum, fluted polypropylene, or plywood. These panels combine the many advantages of various substrates and fiberglass (FRP). NuFiber simplifies installation by eliminating the need to adhere FRP panels to the chosen substrate while in the field. These panels are ideal for new construction of walls, ceilings, or partitions. They easily install directly to studs, ceiling joists, furring strips, or solid surfaces, and some can even be utilized as a drop-in ceiling tile. Fiber-reinforced plastics (FRP) have stood the test of time and when factory laminated to selected substrates have proven to meet the stringent needs of industrial, agricultural, and commercial spaces. NuFiber features durability, sanitation, long-term performance and a trouble-free installation.

WHAT IS PRELAMINATED FRP?

Prelaminated FRP panels (NuFiber) are created by bonding specified FiberLite FRP to a selected substrate to meet an applications performance requirements. They are factory laminated with custom formulated adhesives, applied in a climate-controlled environment and inserted into presses for extended periods to ensure proper adhesion to the substrate. These panels can also be used structurally.

PANEL SIZES

4' x 8'
4' x 10'
4' x 12'

PANEL THICKNESSES

1/8", 1/4", 3/8",
1/2", 5/8", 3/4",
7/8", and 1"

- Combined surface and substrate advantage
- Lower material and labor costs
- Designed for strength, durability, and ease of maintenance
- Ability to install directly to studs, ceiling joists, furring strips, or solid surfaces
- Fast, simple, cost-effective one-step installation
- No messy on-site glue installation
- No delaminating - backed by a NUDO warranty
- Ideal for walls, ceilings and partitions in new construction
- Smooth or Embossed FRP surfaces (.03, .50 & .090)
- Available in any standard size building substrate (OSB, Plywood, Gypsum, and Fluted polypropylene)
